MAT013 Group Coursework

Deadline: 17/5/2013

Instructions

The outputs of this coursework will be:

- A 20 minute group presentation/demonstration to be given on the 17/5/2013 followed by 10 minutes for question.

- All relevant files (code, presentation, notes etc...), websites, demo materials etc should be passed to Joanna Emery or Vincent Knight on the 17/5/2013.

Coursework

As a group you are required to present an aspect of R and/or SAS that is not present in the notes. The presentation should be viewed as a teaching presentation and here are some potential examples:

- Demonstrating how to use a particular aspect of R and/or SAS (an R package for example);

- Explaining certain technical aspects of R and/or SAS (for example if the Program Data Vector had not been explained in class this would have been a potential subject);

- Solving a particular problem using R and/or SAS using techniques not specifically looked at.

You are not constrained by the use of slides (although you are welcome to). Feel free to be imaginative.

On selection of a topic, it is advisable to ask Vincent Knight whether or not it is suitable.

Marking criteria:

- Difficulty: [30]

- Accuracy: [30]

- Originality: [20]

- Presentation/demonstration: [20]
